H

1. The first part of the paper is devoted to a general discussion of the problem of the existence of a solution of the system of equations (1) for arbitrary values of the parameters  $\alpha$  and  $\beta$ . It is shown that the system has a solution for arbitrary values of the parameters  $\alpha$  and  $\beta$  if and only if the condition  $\alpha + \beta = 1$  is satisfied. In this case the solution is unique and is given by the formula

$$x = \frac{1}{\alpha + \beta} \left( \alpha x_1 + \beta x_2 \right)$$

where  $x_1$  and  $x_2$  are the solutions of the system of equations (1) for  $\alpha = 1$  and  $\beta = 0$  and for  $\alpha = 0$  and  $\beta = 1$  respectively.

2. In the second part of the paper the problem of the stability of the solution of the system of equations (1) is considered. It is shown that the solution is stable for arbitrary values of the parameters  $\alpha$  and  $\beta$  if and only if the condition  $\alpha + \beta = 1$  is satisfied. In this case the solution is stable and is given by the formula

$$x = \frac{1}{\alpha + \beta} \left( \alpha x_1 + \beta x_2 \right)$$

where  $x_1$  and  $x_2$  are the solutions of the system of equations (1) for  $\alpha = 1$  and  $\beta = 0$  and for  $\alpha = 0$  and  $\beta = 1$  respectively.
